

Fall Research Retreat Offers Insight to Work at Oak Lake Field Station

Oak Lake Field Station will host its annual fall research retreat on Saturday, October 29th in the Oak Lake administration building. The station hosted or supported multiple research projects both on and off-site over the past year including seven graduate research efforts. This research led to 5 peer-reviewed publication submissions and 17 professional conference presentations over the past year. Come join students and faculty as they discuss their projects. Participate in the social interaction with faculty and students as we celebrate the end of another field sampling season and discuss future research ideas. Attendance at the event is free. However, those not presenting are asked to pay for refreshments and the noon meal. Start time is 8:30 a.m. Contact Nels H. Troelstrup, Jr. (Director) for more details (nels.troelstrup@sdstate.edu ; (605) 688-5503). Support for the Oak Lake Field Station and associated research is provided in-part from the South Dakota Agriculture Experiment Station.
