Submitter to fill in:

Soil sample (0-6 inches only)		Location of Sample		Field History	
Lab Number (Do not write below. For lab use only)	Sample or Field ID	County	Section/ Township/Range	Previous Crop	Two years ago

### Results of Lab Analysis

Lab Number (Assigned from above.)	SCN Population (Number of SCN eggs+J-2/100 cm <sup>3</sup> soil)	Management Suggestions

# Soil Sampling Information Sheet

## Taking a Soil Sample

Soil tests for SCN are prone to variability because of the uneven distribution of the pest across a field. Proper collection is very important.

1. Use any of the tools shown below:

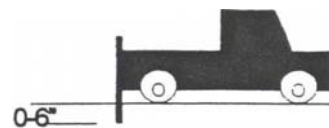

Soil probe

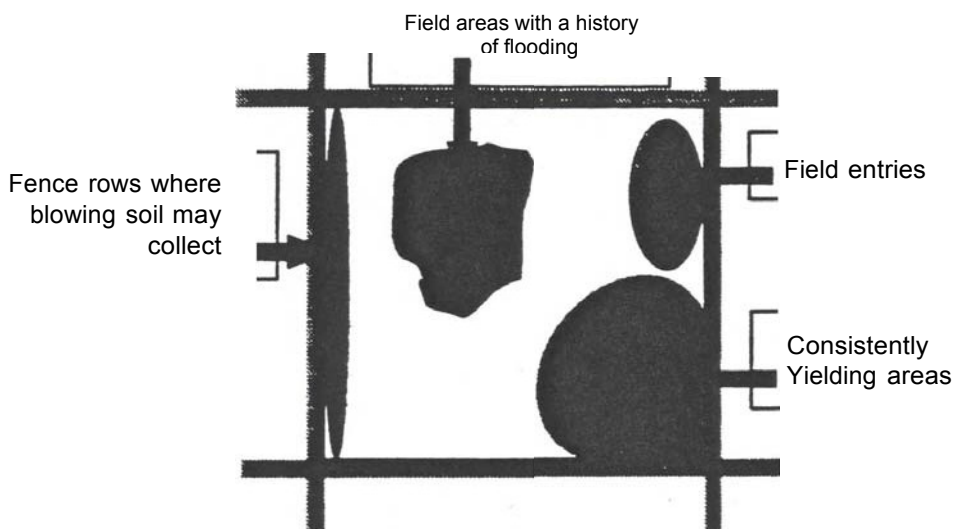

Spade or Trowel

Vehicle Mounted Probe

2. Sampling locations (note areas where SCN may have been introduced):

3. Sampling procedure

- A. Take 15-20 samples from an area with common past cropping history.
- B. Mix thoroughly and submit a pint of this mixed soil sample for testing.
- C. Label each container with your name, address, and sample identification number to correspond with your sample information sheet.

4. Repeat the sampling procedure as outlined for each field area you want tested.

5. If you wish, you may air dry the samples before mailing. DO NOT use heat for drying. Do Not grind the samples.

## Submitting Samples

Complete as much of the information sheet as possible and submit with samples.

**Mail to:** SDSU Plant Diagnostic Clinic  
1148 Medary Ave., Box 2207D  
1451 Stadium Rd  
Brookings, SD 57007-1090
